STUDY REPORT

Lappeenranta University of Technology

LUT School of Energy Systems

Master's Programme in Electrical Engineering

Nigmatulina Nelli

The dream of being a student of the Finnish university was mine since I was at school. One day I decided that every big dream has come true. My way was full of obstacles, endless support of my friends and parents and my hard work. The choice was made in favor of Lappeenranta University of Technology and I have never regretted about it. It took a lot of time to translate documents and to prepare for the English exam. However, looking back, I definitely know that this decision was tipping point of my life.

I heard a lot that the Finnish system of education is considered as one of the best in the world. When I got a chance to compare it with my previous experience, I convinced in it. Teachers are extremely helpful. The atmosphere at the university is stressless. I obtained the highest support at the university beginning from every person. Everything is aimed to help study with great pleasure.

The unique Finnish culture, beautiful nature and Northern lights fascinate every newcomer. There is nothing better than just take a walk after a hard day and breathe fresh clean air. Undoubtedly, I started to learn Finnish language. It is not easy because of complex grammar and pronunciation. However, after a year, people on the streets can understand me and vice versa. Moreover, I aimed to improve my Finnish till the free possession.

Despite this fact that Lappeenranta is not a big city, students can be sure – they will never get bored. Thanks to the ESN of Lappeenranta people can always find how to spend their evening. Multicultural atmosphere of the university makes an endless exchange of traditions of different countries. There are many international dinners, celebration of holidays, parties and simple evenings in the sauna. I met a lot of incredible people with different stories and get friends from all over the world.

Lappeenranta University of Technology is one of the youngest universities in Finland. However, knowledge transmitted to students is one of the most innovative and progressive. Students can be sure that they will get information about last trends in the world of technologies and will show the way for new changes. Moreover, teachers are always open for discussions and ready to learn something new from the students. Infinite exchange of knowledge motivates to study without any special effort.

I would like to thank the Finnish-Saint Petersburgish Fund of the Foundation of the Association of Electrical Engineers for their support. It is important to know that people are interested in young electrical engineers and ready to help them and to motivate more than that were. I truly believe that after my graduation I will have a chance to apply my knowledge in the Finnish electrical field.
